“Slow” R-CNN: Run CNN independently for each region

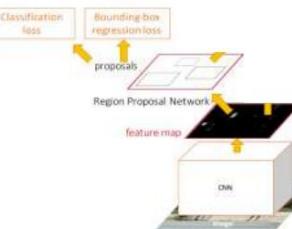

Fast R-CNN: Apply
differentiable
cropping to shared
image features

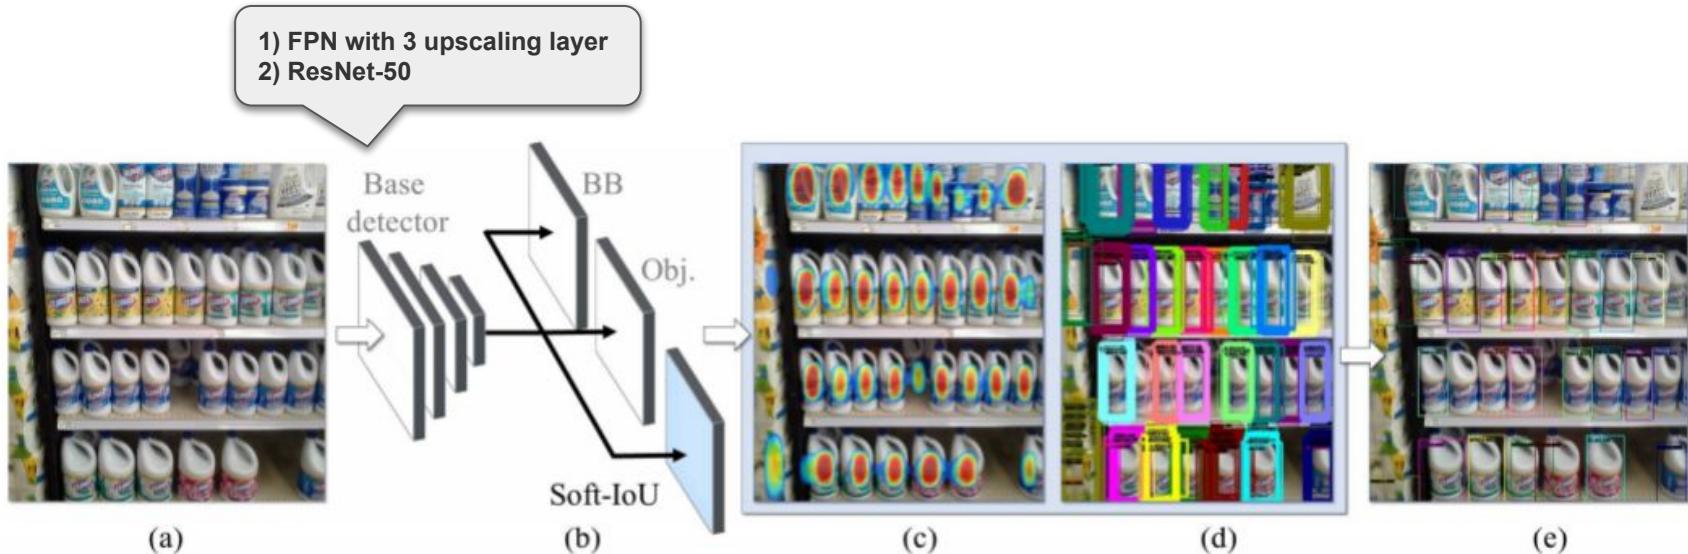

Faster R-CNN
1. Region Proposal Network(**RPN**)直接对图片进行卷积，得到ROIs
2. 对每个ROI卷积，得到bbox和class

Single-Stage: Fully convolutional detector

Precise Detection in Densely Packed Scenes

$$\mathcal{L}_{\text{sIoU}} = \quad (2)$$

$$-\frac{1}{n} \sum_{i=1}^n [IoU_i \log (c_i^{iou}) + (1 - IoU_i) \log (1 - c_i^{iou})],$$

$$\mathcal{L} = \mathcal{L}_{\text{Classification}} + \mathcal{L}_{\text{Regression}} + \mathcal{L}_{\text{sIoU}}. \quad (3)$$

EM-Merger:

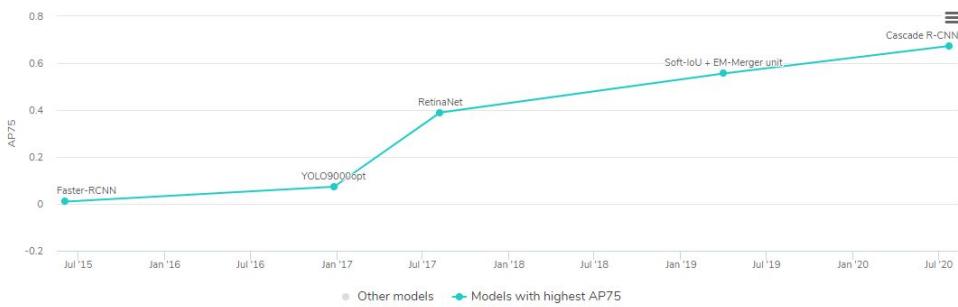

1. converts **Soft-IoU to Gaussians**
2. **EM-approach**, minimize overall **KL** distance, to resolve best K gaussians
3. Produce one single detection per object, totally

$$K = \text{size}(\mathbf{I}) / (\mu_w \mu_h),$$
